# Wireless Exhibition Solution

DATA SHEET

## Exhibitions - Trade Shows - Conferences

DigitalAir specialise in providing exhibitions and conferences with wireless access both for exhibitors and for visitors. Providing a wireless network in such a complex environment is no mean feat. Hundreds of small exhibitor cubicles, thousands of visitors all add up to a busy RF environment which can lead to a variety of problems.

Signal attenuation due to the multipath environment is the main problem in such an area. Without a proper wireless site survey a wireless network is a near impossible solution.

The advantages of providing a wireless network to exhibitors and visitors at an exhibition are:

- Exhibitors are able to connect back to their corporate network so that they can read emails, check stock levels, process orders instantly and be connected with VoIP. This gives them the ability to perform business more efficiently and professionally keeping them inform of their competitors.
- Visitors can browse the internet, check emails and also be connected with VoIP.
- Business visitors can access their corporate networks and check emails.

DigitalAir Wireless can provide a variety of solutions which include:

- Hotspot locations for visitors, which will earn you a revenue.
  - Wireless networks for exhibitors to connect back to their corporate networks.
- Open wireless networks for visitors .
