Data speed  
Reliability

### NETWORK INSTALL

Experienced Installers  
Minimum down time

### SECURITY TESTING

Full security testing  
Ensure the security of

### HOTSPOT SOLUTIONS

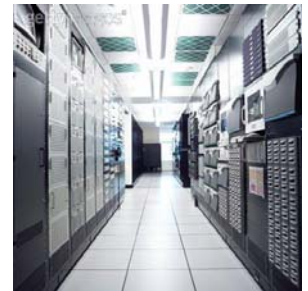

Offer internet access for visitors  
Attract more business visitors  
Increase your company profile  
Retain all revenue!

DigitalAir specialise in integrating wireless networks into companies existing network infrastructure. We will carefully plan and install a secure wireless network that is right for your business.

DigitalAir have developed their own unique four phase system to ensuring a wireless network out performs your every expectation:

#### *Survey - Design - Implementation - Survey.*

- Initial Site survey.
- Wireless Network Design.
- Network Implementation.fs
- Final Site Survey.

#### **Initial Wireless Site Survey**

DigitalAir Wireless site survey will ensure that your wireless network implementation starts correctly and after having performed a site survey, it will give you all you need to confidently move forward with your wireless network. We use the latest industry tools and techniques to map out the RF coverage of your intended area and provide you with detailed documentation on all aspects of the survey.

#### **Wireless Network Design**

Once the initial site survey has been completed our wireless network designers will work with you to build a wireless network that meets all of your requirements in terms of:

- Security
- Data speed and throughput
- Stability
- Reliability

The network design will have to take into account your existing network, existing network policy and future networks demands. The wireless network that we design for your will be scaleable for the future and provide you will the security that meets your business needs.

#### **Network Implementation**

Our experienced wireless network installers will work with you to install your wireless network with little or no disruption to your business. We always aim to have no network down time or to slow company productivity whilst installing. We can perform on "OTJ" training (On the job) for wireless network users and dedicated training for network engineers, empowering them to reliably manage your wireless network when we have completed our work.

#### **Final Site Survey**

Upon completion of the implementation phase we will perform a final wireless site survey so that we can check that the initial network design and your requirements have been reached. Performing a wireless site survey at the end is something that is never thought about until problems arise weeks or months after completion.
